the Stakeholders' Debate

The Stakeholders' Debate

Service & Maintenance

*"If service can fix it on site,
the architect doesn't need to make design changes."*

The Stakeholders' Debate

Production

“The architecture must give way whenever production says: ‘It’s too expensive or too difficult to build.’”

The Stakeholders' Debate

Test & Qualification

“If it doesn’t need to be explicitly tested, the architect doesn’t need to make it more complex or secure.”

The Stakeholders' Debate

Sales

*“If Sales can sell it,
the architect must just make it possible—
no matter what.”*

The Stakeholders' Debate

User Experience

*“If users don't complain,
the architecture is good enough.”*

The Stakeholders' Debate

End-of-Life

“End-of-life is only relevant when the product goes off the market— not during the architecture phase.”

The Stakeholders' Debate

in the end ...

😊

As a Systems Architect,
I must make my stakeholders evenly 😊
